

Style 627 Inconel® reinforced Carbon Packing w/Graphalic Core

Description:

Style 627 is made by braiding resilient Carbon filaments over an Inconel® lined, Graphalic core. This durable valve packing is designed to withstand intense heat and pressures and because of its internal Inconel® reinforcement there is no contact with the stem, effectively eliminating stem wear. In addition this packing seals at lower torques, lasts longer between repackings, and requires 17% - 39% less operating torque than the similar asbestos based packings.

Use:

A good packing for practically any valve application, especially when you need a tough, reliable, and long lasting seal.

Technical parameter:

Temperature	To 1200°F – Steam (650°C)
Speed	To 2500 PSI (17 BAR)
Construction	Braid over Core
PH Value	1-12
